Installation of fuel pumps

Be shure to install insulator

Starting the engine without installing the insulator will immediately damage the rocket arm and may result in the fuel pump or in the engine being permanetly damaged.

We will not accept responsibility for any damage couosed by fitting the pump without using the insulator. Eccentric lobe on camshaft should be furthest away from pump lever when fitting new pump.

WARNING! Hand turn engine only

Montaža izolatorja

Zagon motorja brez montaže izolatorja lahko trajno poškoduje črpalko ali motor.

Ne sprejemamo odgovornosti za poškodbe, ki so nastale zaradi napačne montaže bencinske črpalke.

OPOZORILO! Ročni zagon motorja

Montaža izolatora

Pokretanje motora bez izolatora može dovesti do trajnog oštećenja pumpe ili motora.

Ne preuzimamo odgovornost za oštećenja, koja su nastala zbog pogrešne montaže pumpe za benzin.

UPOZORENJE! Ručno pokretanje motora.

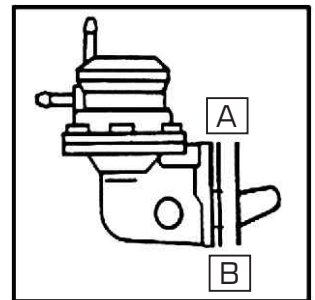

removal & installation of fuel pumps

A common cause of pump failure is OIL CONTAMINATION, which is caused by blockage of the engine breather filter. Is there is any sign of oil contamination clean or replace the engine breather filter before fitting a new fuel pump. Failure to do so will invalidate the warranty. To ensure a perfect fitment of the new fuel pump, the following instructions must be adhered to:

1 check that the new pump you are about to fit is the correct replacement for the old one!

2 general instructions:
always examine the mounting of the old pump before dismantling the pump and fuel lines, make sure that the insulator spacer (a) and the gaskets (b) if originally fitted are reassembled or replaced. there may be a few exceptions where the casting has been modified to make the refitting of the spacer unnecessary. please compare the old pump and spacer with the new pump to be certain.
failure to do so will cause damage to both the fuel pump and the engine, therefore take care, often the spacer remains stuck to the old unit and must be recovered and refitted to the new pump, if necessary.

3 fitting 'plunger' type fuel pump:
you must check the position of the cam before fitting the new fuel pump.
the correct position of the cam drive lobe for pump installation is either top dead centre or bottom dead centre. see illustration!
fitting 'plunger' type fuel pump
you must check the position of the cam before fitting the new fuel pump.
the correct position of the cam drive lobe for pump installation is either top dead centre or bottom dead centre. see illustration!

fitting 'lever' type fuel pump:
ensure that when fitting the new pump that the lever arm is located on top of the camshaft eccentric, then push the pump into the studs.
you must check the position of the cam before fitting the new fuel pump.
the correct position of the cam drive lobe for pump installation is either top dead centre or bottom dead centre. see illustration!

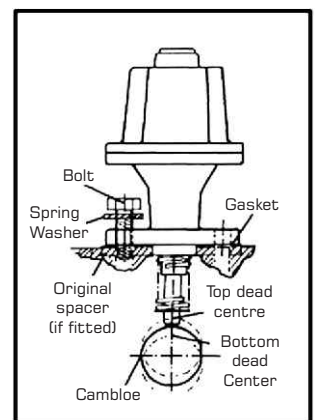

once the pump is correctly positioned (plunger and lever type)
proceed as follows;

4 before tightening the bolts, always ensure that a spring washer is inserted between the bolt heads and the top of the mounting flange as this is recommended by the vehicle manufacturers

5 tighten the bolts gradually and alternately in order that the fuel pumps sits square to the mounting hole.
this operation is critical. if not adhered to, the mounting plate or flange may become deformed causing the push rod or level itself to move off centre causing these to break or eject the spring and retainer upon initial engine start up.

6 check that the mounting is right. reconnect the fuel lines, ensuring that all connections are tight and secure and leakproof.

the pump is now ready to operation.

PTZ d.o.o.
Podhosta 12a
8350 Dolenjske Topljice
Slovenia / EU

www: www.ptz.si
e-mail: info@ptz.si

PTZ produces around 720 different types of classic membrane fuel pumps. Our program consists of diesel and gasoline pumps which can be made with or without our trade mark.

The pumps, we produce, are made by Italian technology from Torino and one-way filter for fuel is produced by technology developed in our own company.

Our technology provides 100% output control system, however the defected goods can be exchanged by guarantee.

Die Firma PTZ produziert caa 720 Typen von klassischen Membranpumpen, die Diesel und Benzinprogramm umfasst. Nach Wunsch koenen wir die Pumpen mit oder ohne unserer Firmennahme liefern.

Die Pumpen produzieren wir nach italiaenische Technologie aus Torino, Einwegkraftstofffilter aber war in unserer Firma entwickelt. 100 prozentige Kontrolle ist Zusammensetzung unserer Produktion. In Garantiefrist beschaedigte unsere Produkte tauschen wir kostenlos.

Alle Marke fuer die wir die Pumpen produzieren fiden sie in Katalog, hier in Prospekt und auf der Interentseite.
